

Dialogic® D/41JCT-LS Media Board

The Dialogic® D/41JCT-LS Media Board is a four-port analog converged communications board that can be used by developers to provide global enterprise applications, such as unified messaging, Interactive Voice Response (IVR), and contact centers. The D/41JCT-LS supports voice, fax, and software-based speech recognition processing in a single PCI or PCI Express slot, providing four analog telephone interface circuits for direct connection to analog loop start lines.

Features

Benefits

CT or H.100 bus connectivity

Enables an application to switch calls to or from other resources

Supports Continuous Speech Processing (CSP)

Provides a flexible speech processing technology, which when coupled with efficient drivers, off-loads critical real-time signal processing in speech-enabled applications to onboard DSPs. Reduces system latency, increases recognition accuracy, and improves overall system response time for high-density speech solutions.

Supports up to four channels of DSP-based onboard fax

Reduces the number of boards per system

Separate models available with Universal PCI or PCI Express edge connector

Universal PCI form factor compatible with 3.3 V and 5.0 V bus signals, enabling deployment in a wide variety of PCI chassis from popular manufacturers; PCI Express form factor compatible with 1x slots (x1 or higher compatible) also available

A-law or μ -law voice coding at dynamically selectable data rates, 24 kb/s to 64 kb/s, selectable on a channel-by-channel basis

Allows optimal tradeoff between disk storage and voice quality

Telcordia CLASS, UK CLI, Japanese Caller ID, and other international protocols

Supports international Caller ID capability via on-hook audio path

Advanced outbound call progress analysis

Monitors outgoing call status quickly and accurately
